As we always want to do better in this career, our research center has formed a group of professional experts responsible for researching new technology of the Secure-Software-Design study materials. The technology of the Secure-Software-Design practice prep will be innovated every once in a while. As you can see, we never stop innovating new version of the Secure-Software-Design Exam Questions. We really need your strong support. We always adopt the kind and useful advices of our loyal customers who wrote to us and gave us their opinions on their study.

As the authoritative provider of Secure-Software-Design guide training, we can guarantee a high pass rate compared with peers, which is also proved by practice. Our good reputation is your motivation to choose our learning materials. We guarantee that if you under the guidance of our Secure-Software-Design study tool step by step you will pass the exam without a doubt and get a certificate. Our Secure-Software-Design Learning Materials are carefully compiled over many years of practical effort and are adaptable to the needs of the Secure-Software-Design exam. We firmly believe that you cannot be an exception.

Once you use our Secure-Software-Design exam materials, you don't have to worry about consuming too much time, because high efficiency is our great advantage. You only need to spend 20 to 30 hours on practicing and consolidating of our Secure-Software-Design learning material, you will have a good result. After years of development practice, our Secure-Software-Design test torrent is absolutely the best. You will embrace a better future if you choose our Secure-Software-Design exam materials.

WGUSecure Software Design (KEO1) Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

Which threat modeling methodology involves creating or using collections of similar threats?

- A. Attack Trees
- B. Data Flow Diagrams
- C. Attack Libraries
- D. Security Profile

Answer: C

NEW QUESTION # 18

Which SDL security goal is defined as ensuring timely and reliable access to and use of information?

- A. Confidentiality
- B. Integrity
- C. Availability
- D. Information security

Answer: C

Explanation:

The term 'availability' in the context of Secure Software Development Lifecycle (SDL) refers to ensuring that systems, applications, and data are accessible to authorized users when needed. This means that the information must be timely and reliable, without undue delays or interruptions. Availability is a critical aspect of security, as it ensures that the software functions correctly and efficiently, providing users with the information they need to perform their tasks.

References:

- * The definition of availability as per the National Institute of Standards and Technology (NIST) Glossary¹.
- * The Microsoft Security Development Lifecycle (SDL) which emphasizes the importance of availability in secure software design².
- * General principles of Secure Software Development Life Cycle (SSDLC) that include availability as a key security goal³.

NEW QUESTION # 19

Which threat modeling step collects exploitable weaknesses within the product?

- A. Rate threats
- B. Set the scope
- C. Analyze the target
- D. Identify and document threats

Answer: D

Explanation:

The step in threat modeling that involves collecting exploitable weaknesses within the product is Identify and document threats. This step is crucial as it directly addresses the identification of potential security issues that could be exploited. It involves a detailed examination of the system to uncover vulnerabilities that could be targeted by threats.

References: The OWASP Foundation's Threat Modeling Process outlines a structured approach where identifying and documenting threats is a key step¹. Additionally, various sources on threat modeling agree that the identification of threats is a fundamental aspect of the process, as it allows for the subsequent analysis and mitigation of these threats^{2,3,4,5}.

NEW QUESTION # 20

Using a web-based common vulnerability scoring system (CVSS) calculator, a security response team member performed an assessment on a reported vulnerability in the user authentication component of the company's new product. The base score of the vulnerability was 8.3 and changed to 9.4 after adjusting temporal and environmental metrics. Which rating would CVSS assign this vulnerability?

- A. Medium severity
- B. High severity
- C. Low severity
- **D. Critical severity**

Answer: D

Explanation:

The task described involves assessing a document management application that has been in use for many years to ensure compliance with organizational policies. This typically falls under the category of a security strategy for legacy code. Legacy code refers to software that has been around for a while and may not have been designed with current security standards or organizational policies in mind. A security strategy for legacy code would involve reviewing and updating the application to meet current security requirements and organizational policies, ensuring that it remains secure and compliant over time.

References: The answer is based on standard practices for managing and securing legacy software systems, which include regular assessments and updates to align with current security standards and organizational policies¹.

NEW QUESTION # 21

Which security assessment deliverable identifies possible security vulnerabilities in the product?

- **A. Threat profile**
- B. Metrics template
- C. List of third-party software
- D. SDL project outline

Answer: A

Explanation:

A threat profile is a security assessment deliverable that identifies possible security vulnerabilities in a product. It involves a systematic examination of the product to uncover any weaknesses that could potentially be exploited by threats. The process typically includes identifying the assets that need protection, assessing the threats to those assets, and evaluating the vulnerabilities that could be exploited by those threats. This deliverable is crucial for understanding the security posture of a product and for prioritizing remediation efforts.

References: The importance of a threat profile in identifying security vulnerabilities is supported by various security resources. For instance, Future Processing's blog on vulnerability assessments outlines the steps involved in identifying security vulnerabilities, which align with the creation of a threat profile¹. Additionally, UpGuard's article on conducting vulnerability assessments further emphasizes the role of identifying vulnerabilities as part of the security assessment process².
