Desktop Web-Development-Applications Practice Exam Software

In the world in which the competition is constantly intensifying, owning the excellent abilities in some certain area and profound knowledge can make you own a high social status and establish yourself in the society. Our product boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our Web-

Development-Applications Exam Torrent before they purchase our product and can download our study materials immediately after the client pay successfully.

WGU Web Development Applications Sample Questions (Q122-Q127):

NEW QUESTION # 122

Which layout method causes images to render to small or too large in browser windows of different sizes?

- A. Fluid
- B. Liquid
- C. Relative width
- **D. Fixed width**

Answer: D

Explanation:

A fixed-width layout method specifies exact pixel values for widths. This approach does not adapt to different screen sizes, leading to images rendering too small or too large on various devices.

* Fixed Width Layout:

* Definition: Uses specific pixel values for the width of elements.

* Example:

```
container {  
width: 800px;  
}
```

* Issues:

* Lack of Flexibility: Does not scale with the size of the viewport, causing images and other elements to appear incorrectly sized on different screen sizes.

* Comparison:

* Fluid/Liquid: Adapts to the screen size using percentages or other relative units.

* Relative Width: Also adapts using units like em or %.

* References:

* MDN Web Docs - Fixed vs. Fluid Layout

* W3C CSS Flexible Box Layout Module Level 1

Using fixed-width layouts can result in poor user experience across different devices, highlighting the importance of responsive design principles.

Top of Form

Bottom of Form

NEW QUESTION # 123

Which feature was introduced in HTML5?

- A. Ability to hyperlink to multiple web pages
- B. Addition of CSS in the HTML file
- C. Adherence to strict XML syntax rules
- **D. Native drag-and-drop capability**

Answer: D

Explanation:

HTML5 introduced several new features that enhanced web development capabilities significantly. One of the notable features is the native drag-and-drop capability.

* Native Drag-and-Drop Capability:

* Description: HTML5 allows developers to create drag-and-drop interfaces natively using the draggable attribute and the DragEvent interface. This means elements can be dragged and dropped within a web page without requiring external JavaScript libraries.

* Implementation:

* Making an Element Draggable: To make an element draggable, you set the draggable attribute to true:

```
<div id="drag1" draggable="true">Drag me!</div>
```

* Handling Drag Events: You use event listeners for drag events such as dragstart, dragover, and drop:

```
document.getElementById("drag1").addEventListener("dragstart", function(event) { event.dataTransfer.setData("text",
```

```

event.target.id);
});
document.getElementById("dropzone").addEventListener("dragover", function(event) { event.preventDefault();
});
document.getElementById("dropzone").addEventListener("drop", function(event) { event.preventDefault(); var data =
event.dataTransfer.getData("text"); event.target.appendChild(document.getElementById(data));
});

```

* Example: This example demonstrates a simple drag-and-drop operation:

html

Copy code

```

<div id="drag1" draggable="true">Drag me!</div>
<div id="dropzone" style="width: 200px; height: 200px; border: 1px solid black;">Drop here</div>

```

* References:

* W3C HTML5 Specification - Drag and Drop

* MDN Web Docs - HTML Drag and Drop API

* HTML5 Doctor - Drag and Drop

HTML5's native drag-and-drop feature streamlines the process of creating interactive web applications by eliminating the need for third-party libraries, thus making it a powerful addition to the HTML standard.

NEW QUESTION # 124

Give the following HTML code:

```

<!DOCTYPE html>
<html>

  <head>
    <title>test</title>
    <style>
      <div>
        {
          width:100px;
          height:50px;
          background-color:red;
        }
      </div>
    </style>
  </head>

  <body>
    <div>Sample</div>
  </body>

</html>

```

Which CSS property would make the corners of the div rounded?

- A. Border-style
- B. Border-collapse
- C. Border-radius
- D. Border-width

Answer: C

Explanation:

To make the corners of a div element rounded, the CSS property border-radius is used. This property allows you to define how rounded the corners should be by specifying a radius.

* CSS border-radius Property:

* Syntax:

```

div {
border-radius: 10px;
}

```

* Description: The value can be in pixels (px), percentages (%), or other units. Higher values create more rounded corners.

* Example:

* Given HTML:

```

<div>Sample</div>

```

* Given CSS:

```

div {
width: 100px;
height: 50px;
background-color: red;
border-radius: 10px;
}

```

- * References:
- * MDN Web Docs - border-radius
- * W3C CSS Backgrounds and Borders Module Level 3

NEW QUESTION # 125

Which HTML segment should a developer use to enable the Offline AppCache application programming interface (API)?

- A. `<html cache="date.appcache">`
- B. `<html manifest="date.appcache">`
- C. `<meta manifest="date.appcache">`
- D. `<meta cache="date.appcache">`

Answer: B

Explanation:

> "To enable the AppCache feature, a `manifest` attribute must be specified in the opening `<html>` tag."

>

> Example:

```

<html
<html manifest="date.appcache">

```

> Note: Although AppCache is deprecated in favor of service workers, this was the correct method in older HTML5 standards.

References:

- * HTML5 Specification (Deprecated): Application Cache
- * MDN Web Docs: Using the application cache

NEW QUESTION # 126

A web developer need to ensure that a message appears if the user's browser does not support the audio files on a web page. How should this designer code the audio element?

- A.

```
<audio alt="No mpeg support" />
<source src="audio/song.mp3" type="audio/mpeg" />
</audio>
```
- B.

```
<audio>
<source src="audio/song.mp3" type="audio/mpeg" />
</audio>
No mpeg support
```
- C.

```
<audio>
<source src="audio/song.mp3" type="audio/mpeg" alt="No mpeg support." />
</audio>
```
- D.

```
<audio>
<source src="audio/song.mp3" type="audio/mpeg" />
No mpeg support.
</audio>
```

Answer: D

Explanation:

To ensure that a message appears if the user's browser does not support the audio files on a web page, the developer should use the `<audio>` element correctly. The `<audio>` element supports fallback content, which is displayed if the browser does not support the specified audio formats.

* Correct Usage:

* Fallback Content: Place the message as fallback content inside the `<audio>` element. Browsers that do not support the audio format will display this message.

* Example:

```

<audio>
<source src="audio/song.mp3" type="audio/mpeg" />
No mpeg support.
</audio>

```

- * Explanation of Options:
- * Option A: Incorrect. The alt attribute is not valid for the <source> element.
- * Option B: Incorrect. The alt attribute is not valid for the <audio> element.
- * Option C: Incorrect. The alt attribute is used incorrectly in the <audio> element.
- * Option D: Correct. The message "No mpeg support." is placed correctly as fallback content inside the <audio> element.

:

W3C HTML5 Specification - The audio element

MDN Web Docs - <audio>

Using the fallback content inside the <audio> element ensures that users with unsupported browsers receive a meaningful message, improving the overall user experience.

NEW QUESTION # 127

.....

The loss of personal information in the information society is indeed very serious, but Web-Development-Applications guide materials can assure you that we will absolutely protect the privacy of every user. Our Web-Development-Applications study braindumps users are all over the world, is a very international product, our Web-Development-Applications Exam Questions are also very good in privacy protection. And we offer good services on our Web-Development-Applications learning guide to make sure that every detail is perfect.
