What virtual warehouse feature or setting will reduce the performance impact when running larger-than- average queries, by offloading portions of the query processing work to shared compute resources?

- A. Using the query acceleration service
- B. Using the search optimization service
- C. Disabling auto-suspend
- D. Using a multi-cluster virtual warehouse

Answer: A

Explanation:
* The Query Acceleration Service offloads portions of query processing to shared compute resources to handle larger-than-average queries without impacting virtual warehouse performance.
* This feature is ideal for resource-intensive queries and operates independently of virtual warehouse scaling.
