ActualtestPDF presents you with their effective FCP - FortiAnalyzer 7.4 Analyst (FCP_FAZ_AN-7.4) exam dumps as we know that the registration fee is very high (from \$100-\$1000). ActualtestPDF product covers all the topics with a complete collection of

actual FCP_FAZ_AN-7.4 exam questions. We also offer free demos and up to 1 year of free Fortinet Dumps updates. So, our Fortinet FCP_FAZ_AN-7.4 prep material is the best to enhance knowledge which is helpful to pass FCP - FortiAnalyzer 7.4 Analyst (FCP_FAZ_AN-7.4) on the first attempt.

Fortinet FCP_FAZ_AN-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Playbooks: This domain measures the skills of Fortinet Network Analysts in creating and managing playbooks. Candidates will explain playbook components and develop workflows that automate responses to security incidents, improving operational efficiency in SOC environments.
Topic 2	<ul style="list-style-type: none">• SOC Events and Incident Management: This domain targets Fortinet Network Analysts and focuses on managing security operations center (SOC) events. Candidates will explain SOC features on FortiAnalyzer, manage events and incidents, and understand the incident lifecycle to enhance incident response capabilities.
Topic 3	<ul style="list-style-type: none">• Reports: This section evaluates the skills of Fortinet Security Analysts in managing reports within FortiAnalyzer. Candidates will learn to create, troubleshoot, and optimize reports to ensure accurate data presentation and insights for security analysis.
Topic 4	<ul style="list-style-type: none">• Features and Concepts: This section of the exam measures the skills of Fortinet Security Analysts and covers the fundamental concepts of FortiAnalyzer.
Topic 5	<ul style="list-style-type: none">• Logging: Candidates will learn about logging mechanisms, log analysis, and gathering log statistics to effectively monitor security events and incidents.

Fortinet FCP - FortiAnalyzer 7.4 Analyst Sample Questions (Q18-Q23):

NEW QUESTION # 18

What are two benefits of using fabric connectors? (Choose two.)

- A. You do not need an additional license to send logs to the cloud platform.
- B. Using fabric connectors is more efficient than using third-party polling with API.
- C. Fabric connectors allow you to improve redundancy.
- D. They allow FortiAnalyzer to send logs in real-time to public cloud accounts.

Answer: C,D

NEW QUESTION # 19

An administrator has configured the following settings:

config system fortiview settings

set resolve-ip enable

end

What is the significance of executing this command?

- A. It resolves the source and destination IP addresses to a hostname in FortiView on FortiAnalyzer.
- B. It resolves the destination IP address to a hostname in FortiView on FortiAnalyzer.
- C. Use this command only if the source IP addresses are not resolved on FortiGate.
- D. You must configure local DNS servers on FortiGate for this command to resolve IP addresses on Forti Analyzer.

Answer: B

NEW QUESTION # 20

Which log will generate an event with the status Unhandled?

- A. An IPS log with action=pass.
- B. An AppControl log with action=blocked.
- C. A WebFilter log will action=dropped.
- D. An AV log with action=quarantine.

Answer: A

Explanation:

In FortiOS 7.4.1 and FortiAnalyzer 7.4.1, the "Unhandled" status in logs typically signifies that the FortiGate encountered a security event but did not take any specific action to block or alter it. This usually occurs in the context of Intrusion Prevention System (IPS) logs.

IPS logs with action=pass: When the IPS engine inspects traffic and determines that it does not match any known attack signatures or violate any configured policies, it assigns the action "pass". Since no action is taken to block or modify this traffic, the status is logged as "Unhandled." Let's look at why the other options are incorrect:

An AV log with action=quarantine: Antivirus (AV) logs with the action "quarantine" indicate that a file was detected as malicious and moved to quarantine. This is a definitive action, so the status wouldn't be "Unhandled." A WebFilter log will action=dropped:

WebFilter logs with the action "dropped" indicate that web traffic was blocked according to the configured web filtering policies. Again, this is a specific action taken, not an "Unhandled" event.

An AppControl log with action=blocked: Application Control logs with the action "blocked" mean that an application was denied access based on the defined application control rules. This is also a clear action, not "Unhandled."

NEW QUESTION # 21

What statements are true regarding the "store and upload" log transfer option between FortiAnalyzer and FortiGate? (Choose three.)

- A. Both secure communications methods (SSL and IPsec) allow the store and upload option.
- B. Disk logging is enabled on the FortiGate through the CLI only.
- C. Only FortiGate models with hard disks can send logs to FortiAnalyzer using the store and upload option.
- D. All FortiGates can send logs to FortiAnalyzer using the store and upload option.
- E. Disk logging is enabled by default on the FortiGate.

Answer: A,B,C

NEW QUESTION # 22

After generating a report, you notice the information you were expecting to see is not included in it. However, you confirm that the logs are there.

- A. Increase the report utilization quota.
- B. Check the time frame covered by the report.
- C. Test the dataset
- D. Disable auto-cache.

Answer: B,C

Explanation:

When a generated report does not contain the expected information even though the logs are confirmed to be present, it typically indicates an issue with the report's configuration. There are a few common reasons this might happen:

Option A - Check the Time Frame Covered by the Report:

Reports are generated based on a specific time frame. If the report's time frame does not cover the period when the relevant logs were collected, those logs won't appear in the report output. Verifying and adjusting the time frame is essential to ensure the report includes all relevant data.

Conclusion: Correct.

Option B - Disable Auto-Cache:

Auto-cache is designed to improve report generation speed by using cached data. Disabling auto-cache would typically only be relevant if the report is pulling outdated data from cache, but it doesn't directly affect whether specific logs are included in a report.

Conclusion: Incorrect.

Option C - Increase the Report Utilization Quota:

The report utilization quota is related to the resource limits for generating reports. It does not directly influence whether certain data appears in a report. Increasing this quota would help only if there are resource issues preventing the report from completing, not if specific logs are missing from the report.
