

Wir machen C_TS422_2023 leichter zu bestehen!

Übrigens, Sie können die vollständige Version der EchteFrage C_TS422_2023 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1iuFlzOEhnxnJmN8YU82IE1JXyc-mOZz3>

Sie brauchen nicht so viel Geld und Zeit, nur ungefähr 30 Stunden spezielle Ausbildung, dann können Sie ganz einfach die SAP C_TS422_2023 Zertifizierungsprüfung nur einmalig bestehen. EchteFrage bietet Ihnen die Prüfungsthemen, deren Ähnlichkeit mit den realen Prüfungsübungen sehr groß ist.

SAP C_TS422_2023 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Material Requirements Planning in SAP S • 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
Thema 2	• Master Data in SAP S • 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Thema 3	• Introduction to SAP S • 4HANA Production Planning: This section covers an overview of production planning components, functions, and planning approaches. Exploration of emerging trends.
Thema 4	• Lean Manufacturing in SAP S • 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
Thema 5	• Introduction to SAP S • 4HANA Supply Chain Planning: This part covers the background and motivation for SAP S • 4HANA, its main components, business applications, and user experience strategy.
Thema 6	• Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.

C_TS422_2023 Deutsch Prüfungsfragen, C_TS422_2023 Online Prüfung

Die Schulungsunterlagen zur SAP C_TS422_2023 Zertifizierungsprüfung von EchteFrage sind unvergleichbar. Das hat nicht nur mit der Qualität zu tun. Am wichtigsten ist es, dass Die Schulungsunterlagen zur SAP C_TS422_2023 Zertifizierungsprüfung von EchteFrage mit allen IT-Zertifizierungen im Einklang sind. So kümmern sich viele Kandidaten um uns. Sie glauben in uns und sind von uns abhängig. Das hat genau unsere Stärke reflektiert. Sie werden sicher Ihren Freuden nach dem Kauf unserer Produkte EchteFrage empfehlen. Denn es kann Ihnen wirklich sehr helfen.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing C_TS422_2023 Prüfungsfragen mit Lösungen (Q53-Q58):

53. Frage

How can a material availability check be triggered automatically for a production order? Note: There are 2 correct answers to this question.

- A. By capacity planning
- **B. By order release**
- **C. By mass processing**
- D. By order confirmation

Antwort: B,C

Begründung:

In SAP S/4HANA, a material availability check ensures components are available before production proceeds. This check can be triggered automatically:

* By order release(C): When a production order is released (transaction CO02 or mass release via CO05N), the system can perform an availability check based on settings in the order type-dependent parameters (Customizing: Production > Shop Floor Control > Define Order Types). The "Availability Check" field (e.g., "2 - Check at Release") triggers this automatically, ensuring materials are reserved or shortages are flagged.

* By mass processing(D): Using transaction COHV (Mass Processing of Production Orders), planners can execute availability checks for multiple orders simultaneously. The function "Check Material Availability" can be scheduled or run manually, automating the process across orders.

By capacity planning(A) focuses on work center capacity, not material availability. By order confirmation(B) may trigger a check for remaining quantities, but it's not a standard automatic trigger point-it's more relevant for backflushing or goods issue. This is outlined in SAP's production order management documentation.

54. Frage

How would you define pegging in the context of Advanced Planning?

- **A. An evaluation that is ordered according to the bill-of-material structure of all related products and represents the relationship between the receipt and the issue elements**
- B. An evaluation that is ordered according to the network structure of all related products and represents the coverage of issue elements with receipt elements and stock
- C. An evaluation to identify overstock situations in the balance between the receipt and the issue elements after the production planning run
- D. An evaluation to identify material or capacity shortages in the bill-of-material structure after the production planning run

Antwort: A

Begründung:

In SAP S/4HANA Advanced Planning (PP/DS), pegging is a key concept that links supply (receipts) to demand (issues) across the production structure. It is defined as:

* An evaluation that is ordered according to the bill-of-material structure of all related products and represents the relationship between the receipt and the issue elements(A): Pegging (visible in /SAPAPO

/RRP3 or Product View) assigns receipt elements (e.g., planned orders, stock) to issue elements (e.g., sales orders, dependent requirements) based on the BOM hierarchy. It follows the BOM structure (top-down or bottom-up) to ensure each demand is covered by a specific supply, maintaining traceability and sequence (e.g., fixed or dynamic pegging).

Option B (overstock situations) relates to stock analysis, not pegging's core purpose. Option C (network structure) is inaccurate-pegging uses BOM, not a network, and focuses on assignment, not just coverage.

Option D (shortages) is a result of planning, not pegging's definition, which is about linking, not identifying gaps. This aligns with SAP's PP/DS pegging documentation.

55. Frage

Under what circumstances can you change the material type for a material if stocks, reservations, or purchasing documents exist?
Note: There are 2 correct answers to this question.

- A. The same batch management level is used.
- **B. The same base unit of measure is used.**
- **C. The quantity and value updates are the same.**
- D. The same account category is used.

Antwort: B,C

Begründung:

In SAP S/4HANA, changing the material type (transaction MMAM) is restricted if stocks, reservations, or purchasing documents exist, but it's allowed under specific conditions:

* The quantity and value updates are the same(A): The old and new material types must have identical quantity and value update settings in their valuation areas (configured in OMS2, Material Type Customizing). For example, both must update quantity and value (e.g., "FERT" to "HALB"), or neither (e.g., "NLAG" to "DIEN"). If these differ, the change is blocked due to inconsistencies in stock valuation.

* The same base unit of measure is used(C): The base unit (material master, Basic Data 1 view) must remain unchanged between material types. Changing it (e.g., from "PC" to "KG") would invalidate existing stock or document quantities, so the system requires consistency to allow the type change.

The same batch management level(B) (e.g., plant or material level, configured in OMCT) is not a strict requirement-batch settings can differ as long as other conditions are met. The same account category(D) (e.

g., General Ledger account determination) influences posting but isn't a prerequisite-account assignment can be adjusted post-change. This is per SAP's material type change rules.

56. Frage

Generic Parent » Generic 1 pt

What is the purpose of collective orders?

- A. To post any component withdrawal as single backflush with order confirmation
- B. To combine order management of co-products and by-products with the main product
- **C. To manage production orders for an entire finished product on multiple levels**
- D. To post production costs on a cost collector instead of the production order

Antwort: C

Begründung:

Collective orders are used to represent multilevel production structures for materials produced in-house, where the manufacturing order for the highest material in the structure automatically generates manufacturing orders for the semifinished products in the structure. This allows for an integrated view of the production process and avoids unnecessary placements in storage or removals from storage between production levels. Collective orders can consist of planned orders, production orders, or process orders, and each order has its own order number. Collective orders can be processed with or without automatic goods movements, depending on the business scenario. 57. Frage

which of the following automation options can you use for production orders? Note: There are 2 Correct answers to this question?

- **A. You can use trigger points to automatically create rework orders via confirmation.**
- B. you can use the production scheduling profile to automatically set orders to I technically complete
- **C. you can use mass processing to set production orders to technically complete**
- D. You can use mass processing to read PP master data for production orders

Antwort: A,C

Begründung:

You can use mass processing to set production orders to technically complete. Mass processing allows you to perform the same

action for multiple production orders at once, such as changing the status, printing, or confirming. You can use the Set to Technically Complete action to close the production orders that are finished and do not require any further processing. This action updates the order status to TECO and prevents any further changes to the order¹².

You can use trigger points to automatically create rework orders via confirmation. Trigger points are predefined events that occur during the execution of a production order, such as reaching a certain operation or quantity. You can assign actions to trigger points, such as creating a notification, a rework order, or a quality inspection. For example, you can use a trigger point to automatically create a rework order for defective goods when you confirm an operation. The rework order is linked to the original order and inherits the relevant data from it³.
