NEW QUESTION # 37
Why is the Sales Data API the preferred method for sending sales data to Smart Insight?

- A. It provides support for custom columns.
- B. It provides real-time validation of the file.
- C. The data is usable more quickly in the UI.
- D. The columns can be sent in any order.

Answer: C

Explanation:
The Sales Data API is preferred for Smart Insight:
* Option C:Correct. API submissions are processed faster than file uploads, making data available in the UI (e.g., dashboards) more quickly.
* Option A:Incorrect. Column order is predefined in the API schema, not flexible.
* Option B:Incorrect. Custom columns are possible but not the primary reason for preference.
* Option D:Incorrect. Validation occurs, but "real-time" is not the key benefit over speed of UI availability.The SAP Emarsys Help Portal under "Sales Data API" highlights faster UI integration.

NEW QUESTION # 38
You have 1500 contacts and have manually uploaded 100 additional new ones, but the number of available contacts on the Database Growth widget still shows 1500. You checked that the email address fields are filled and the email addresses are valid. What are some possible reasons why the additional new contacts are not showing up?
