

Wonderful 1z0-915-1 Exam Questions: Oracle MySQL HeatWave Implementation Associate Rel 1 Exhibit the Most Useful Training Guide- Free4Torrent

DOWNLOAD the newest Free4Torrent 1z0-915-1 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1FBFAWpjzK6_0IizAuZ9ShiMSy6ZWUfx

Do you want to find a fast way to step towards your dreams? We can help you by providing the latest and best useful 1z0-915-1 pdf torrent to guarantee your success in Oracle 1z0-915-1 test certification. We keep our 1z0-915-1 vce torrent the latest by checking the newest information about the updated version every day. Add the latest topics into the 1z0-915-1 Dumps, and remove the useless questions, so that your time will be saved and study efficiency will be improved.

Oracle 1z0-915-1 Exam Syllabus Topics:

Topic	Details
Topic 1	Describe the architecture of the HeatWave cluster, adding a HeatWave cluster to a DB system, and determine whether a query is offloaded to HeatWave cluster for execution.
Topic 2	Backing up and restoring DB systems: For database administrators and disaster recovery specialists, this section of the exam covers backing up and restoring a DB system, managing automatic backups, and performing point-in-time recovery.
Topic 3	Provisioning and Connecting DB systems: For system administrators and database engineers, this part of the exam covers identifying VCN requirements for provisioning DB systems, connecting to DB systems with OCI Bastion, connecting to DB systems with MySQL Shell, connecting to DB systems with OCI Cloud Shell, connect to DB system with OCI SQL Worksheet, and authenticate DB system with OCI Identify Access Management credentials.
Topic 4	Read Replicas: For database architects and replication specialists, this domain of the exam covers creating and managing read replicas, describing the read replica load balancer, connecting to a read replica, etc.

Topic 5	HeatWave Cluster: For database performance specialists and cloud architects, this section of the exam covers
Topic 6	High Availability: For system reliability engineers and database architects, this domain of the exam covers how to enable and disable the high availability of a DB system, explain placement considerations for a high availability DB system, distinguish between switchover and failover, etc.
Topic 7	Managing DB systems: For network administrators and cloud infrastructure specialists, this domain of the exam covers demonstrating a command of DRG and DRG Attachments, applying BGP in the OCI environment, evaluating OCI VPN Services, and validating the various FastConnect products from OCI.
Topic 8	Inbound Replication: For database administrators and replication experts, this section of the exam covers setting up and troubleshoot inbound replication and creating channels.
Topic 9	MySQL HeatWave Configurations: For database administrators and performance tuning specialists, this part of the exam covers creating custom configurations, comparing configurations, describing the effects of changing dynamic and non-dynamic variables, and updating a DB system configuration.
Topic 10	MySQL HeatWave Service: For database administrators, cloud architects, and DevOps engineers, this section of the exam covers identifying key features and benefits, describing MySQL HeatWave architecture, defining MySQL HeatWave terminology, and identifying MySQL HeatWave limitations.

1z0-915-1 Unlimited Exam Practice, 1z0-915-1 Free Updates

When you are studying for the 1z0-915-1 exam, maybe you are busy to go to work, for your family and so on. How to cost the less time to reach the goal? It's a critical question for you. Time is precious for everyone to do the efficient job. If you want to get good 1z0-915-1 prep guide, it must be spending less time to pass it. Exactly, our product is elaborately composed with major questions and answers. If your privacy let out from us, we believe you won't believe us at all. That's uneconomical for us. In the website security, we are doing well not only in the purchase environment but also the 1z0-915-1 Exam Torrent customers' privacy protection. We are seeking the long development for 1z0-915-1 prep guide.

Oracle MySQL HeatWave Implementation Associate Rel 1 Sample Questions (Q45-Q50):

NEW QUESTION # 45

The following statements execute successfully:

```
CALL sys.ML_TRAIN('ml_data.iris', 'class', NULL, @model);
SELECT @model;
```

Which three are true? (Choose three.)

- A. The statements create a classification model.
- B. The statements validate the data set but do not create a model.
- C. The training data set is obtained from the ml_data table in the iris schema.
- D. The target column is class.
- E. The generated model handle is shown in the output.

Answer: A,D,E

Explanation:

The statements `CALL sys.ML_TRAIN('ml_data.iris', 'class', NULL, @model);` and `SELECT @model;` are used to create and retrieve a machine learning model in MySQL HeatWave AutoML. The following are true:

* The generated model handle is shown in the output (Answer B): After training the model, the handle (identifier) for the model is stored in the `@model` variable and can be retrieved with the `SELECT @model;` statement.

* The statements create a classification model (Answer C): The `ML_TRAIN` procedure is used to create a classification model since

the target column (class) indicates a classification problem.

* The target column is class(Answer E): The second argument in the ML_TRAIN call specifies the target column for the machine learning model, which is class in this case.

References:

* MySQL HeatWave AutoML Documentation

* ML_TRAIN Procedure Documentation

NEW QUESTION # 46

You want to train a model that predicts sales based on the available data the company holds.

This is an excerpt of the sales table:

Order_no	Quantity	price_per_item	Order_status	Sales
1017	30	38.74	Shipped	1,162.2
1021	34	81.35	Shipped	2,765.9
1025	41	98.57	Shipped	4,041.37
1032	45	100	In Process	4,500
1088	49	100	Shipped	4,900

Which command trains the model?

- A. CALL sys.ML_TRAIN('ml_data.sales', 'Sales', JSON_OBJECT('task', 'classification'), @model);
- B. CALL sys.mML_TRAIN('ml_data.sales', 'Sales', JSON_OBJECT('task', 'forecasting'), @model);
- C. CALL sys.ML_TRAIN('ml_data.sales', 'Sales', JSON_OBJECT('task', 'regression'), @model);
- D. CALL sys.ML_TRAIN('ml_data.sales', 'Sales', JSON_OBJECT('task', 'anomaly_detection'), @model);

Answer: C

Explanation:

To train a model that predicts sales, the appropriate machine learning task would be regression, as it involves predicting a continuous value (sales) based on the given data. The command to train such a model is:

D: CALL sys.ML_TRAIN('ml_data.sales', 'Sales', JSON_OBJECT('task', 'regression'), @model); This command calls the ML_TRAIN procedure on the ml_data.sales table, with Sales as the target variable, specifying the task as regression.

NEW QUESTION # 47

You have successfully enabled high availability of a stand-alone DB system. Which is true?

- A. The DB system performs load balancing by distributing client connections to all instances.
- B. The DB system has three instances running in different availability or fault domains.
- C. The DB system provides new port numbers on the same endpoint to connect to the secondary instances for read-only connections.
- D. The DB system provides new endpoints to connect to the secondary instances for read-only connections.

Answer: B

Explanation:

When high availability is enabled for a stand-alone DB system, the DB system has three instances running in different availability or fault domains (Answer D).

* High Availability Configuration: This setup involves creating multiple instances of the DB system across different availability or fault domains to ensure redundancy and minimize the risk of downtime due to hardware or network failures.

* Instances: Typically, there are three instances—one primary and two replicas—ensuring that the system can failover seamlessly if one instance goes down.

References:

* OCI MySQL High Availability

NEW QUESTION # 48

You want to restore a stand-alone DB system to a high-availability DB system with a point-in-time recovery. Which three are required? (Choose three.)

- A. Point-in-time recovery must be enabled before the point in time to which you want to restore.
- B. An automatic backup taken before the selected point in time must be available.
- C. Every user table must have a primary key.
- D. A manual backup taken before the selected point in time must be available.
- E. The stand-alone DB system must remain active during the restore.

Answer: A,B,D

Explanation:

To restore a stand-alone DB system to a high-availability DB system with point-in-time recovery, the following are required:

B:Point-in-time recovery must be enabled before the point in time to which you want to restore: Point-in-time recovery (PITR) must be enabled beforehand to allow restoration to a specific point in time. C.An automatic backup taken before the selected point in time must be available: You need an automatic backup from before the desired restore point. D.A manual backup taken before the selected point in time must be available:

Manual backups are also essential to ensure you can restore to the desired point in time.

NEW QUESTION # 49

What is the benefit of creating a new DB system with data import?

- A. Smaller storage size with better compression
- B. Consistent data with no user connection
- C. Faster backup with a first full backup
- D. Faster import with minimal logging

Answer: D

Explanation:

Creating a new DB system with data import provides the benefit of faster import with minimal logging. This process is optimized to import large datasets efficiently and quickly, reducing the amount of logging overhead and ensuring a rapid setup of the new DB system.

NEW QUESTION # 50
