Our Workday-Pro-HCM-Reporting training dumps are made by our Workday-Pro-HCM-Reporting exam questions responsible company which means you can gain many other benefits as well. We offer free demos of our for your reference, and send you the new updates if our experts make them freely. What is more, we give some favorable discount on our Workday-Pro-HCM-Reporting Study Materials from time to time, which mean that you can have more preferable price to buy our products.

Workday Pro HCM Reporting Certification Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

You are configuring a matrix report that groups average performance ratings by supervisory organization. However, the report users would like to be able to drill down and view data at each level of the hierarchy. How should you edit the report definition to achieve this functionality?

- A. Include a Lookup Hierarchy Rollup calculated field in the Drillable Fields grid.
- B. Add a Detail Data Override.
- C. Include a Lookup Related Value calculated field in the Detail Data grid.
- D. Update your supervisory organization sort order to Logical sort order - Descending.

Answer: A

Explanation:

Matrix reports in Workday allow grouping and summarization of data, but to drill down through hierarchical structures such as supervisory organizations, you must configure hierarchy-aware calculated fields. The Lookup Hierarchy Rollup function enables drillable hierarchies, showing performance metrics at each level of the organizational tree.

The Workday binder notes: "Matrix reports allow you to group data, summarize the metrics for each grouping, and drill into the summarizations for further analysis." . This means you can expand results from the top supervisory org down to teams and individual workers.

Using a simple Lookup Related Value would only pull in one field from a related object, not enable hierarchical drill-down. Similarly, changing sort order or adding overrides does not create drillable hierarchies. Only Lookup Hierarchy Rollup enables this behavior.

NEW QUESTION # 36

You want to create a report that groups all employees by area code. However, the field you are pulling from contains the entire phone number.

- A. Substring Text
- B. Format Text
- C. Concatenate Text
- D. Format Number

Answer: A

Explanation:

The Substring Text function in Workday calculated fields extracts a portion of a string based on character position and length. To capture the area code from a phone number (e.g., the first three digits of a 10-digit number), you define the substring starting at position 1 with a length of 3.

From Workday Reporting documentation:

"Substring Text - Returns a portion of a text string based on a starting position and specified length." Example: Phone number 415551234 → Substring(1,3) = 415.

Therefore, the correct choice is A. Substring Text.

NEW QUESTION # 37

You are configuring a data column on a composite report. You would like to map a subreport prompt to a value in a prompt set, but the prompt is not appearing on the Map Sub Report Prompts grid in the column configuration options. What could be causing this?

- A. You do not have access to the domain securing the report prompt.
- B. You did not select Use Value From Prompt Set as the default prompt value in the subreport.
- **C. The Do Not Prompt at Runtime checkbox is selected for the prompt on the subreport.**
- D. You already set a default value for the prompt on the subreport.

Answer: C

Explanation:

In Workday, when you configure composite reports, you can map subreport prompts to prompt sets for greater flexibility. However, if the Do Not Prompt at Runtime checkbox is selected on the subreport prompt, the prompt will not be exposed in the Map Sub Report Prompts grid. This is because Workday interprets the prompt as suppressed and therefore not available for mapping at runtime.

From the Workday binder: "Prompts suppressed with the Do Not Prompt at Runtime option will not appear in the Map Sub Report Prompts grid in composite report configuration. To map a subreport prompt, ensure the prompt is enabled at runtime." Other options do not directly cause this issue: default values on prompts do not suppress them, security issues would block data but not hide the prompt mapping, and prompt set configuration errors affect defaulting but not visibility.

Thus, the correct answer is B. The Do Not Prompt at Runtime checkbox is selected for the prompt on the subreport.

NEW QUESTION # 38

You would like to create an advanced report that contains information about employees and their dependents. Where can you go to identify the field that links the two business objects, Worker and Dependent?

- A. The Columns tab of a report definition
- **B. The Related Business Objects tab of the Business Object Details report**
- C. The business object's Related Actions > Reporting > Report Fields and Values
- D. The Related Business Object column of the Report Fields report

Answer: B

Explanation:

To connect multiple business objects in reporting, Workday provides the Business Object Details report. The Related Business Objects tab within this report shows how different business objects are linked (e.g., Worker to Dependent). This enables report writers to identify which fields connect the primary and secondary objects.

From the Workday Reporting documentation:

"The report data source provides the view into the primary business object. This object gives you access to class report fields as well as links to related business objects." Therefore, the correct answer is C. The Related Business Objects tab of the Business Object Details report.

NEW QUESTION # 39

A compensation analyst would like a report that includes an Expected Deadline field that returns a date 60 days after the Bonus Approval Date field.

- A. Format Date
- **B. Increment or Decrement Date**
- C. Build Date
- D. Date Difference

Answer: B

Explanation:

Workday calculated fields allow users to manipulate dates, numbers, and text values. To calculate a new date based on an existing date field (e.g., Bonus Approval Date), you use the Increment or Decrement Date function. This adds or subtracts a defined number of days, months, or years from the source date.

From Workday Reporting documentation:

"Increment or Decrement Date - Returns a date that is a specified number of days, months, or years before or after the value of the source date field." Example: If the Bonus Approval Date is 01/01/2025, adding 60 days using this function would return 03/02/2025.

Thus, the correct choice is A. Increment or Decrement Date.

NEW QUESTION # 40

If you are going to purchasing the Workday-Pro-HCM-Reporting exam bootcamp online, you may pay more attention to the pass rate. With the pass rate more than 98%, our Workday-Pro-HCM-Reporting exam materials have gained popularity in the international market. And we have received many good feedbacks from our customers. In addition, we offer you free demo to have a try before buying Workday-Pro-HCM-Reporting Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can also enjoy free update for one year, and the update version for Workday-Pro-HCM-Reporting will be sent to your email automatically.
