

# Workday Workday-Prism-Analytics Exam Questions - 1 year of Free Updates

BONUS!!! Download part of TestKingFree Workday-Prism-Analytics dumps for free: [https://drive.google.com/open?id=1\\_yLwBSxMS9P4GIV-9EeegzmeaVYhE](https://drive.google.com/open?id=1_yLwBSxMS9P4GIV-9EeegzmeaVYhE)

If you do not choose a valid Workday-Prism-Analytics practice materials, you will certainly feel that your efforts and gains are not in direct proportion, which will lead to a decrease in self-confidence. You spent a lot of time, but the learning outcomes were bad. If you are facing these issues, then we suggest that you try our Workday-Prism-Analytics training prep, which have great quality and they are efficient. Under the guidance of our Workday-Prism-Analytics learning materials, you can improve efficiency and save time. Because we can provide high-quality Workday-Prism-Analytics exam questions to help you pass the exam successfully.

The feedback collected was used to design our products through interviews with top Workday Pro Prism Analytics Exam Workday-Prism-Analytics exam professionals. You are certain to see questions similar to the questions on this Workday Workday-Prism-Analytics exam dumps on the main Workday-Prism-Analytics Exam. All you have to do is select the right answer, which is already in the Workday Workday-Prism-Analytics questions. Workday Pro Prism Analytics Exam Workday-Prism-Analytics exam dumps have mock exams that give you real-life exam experience.

## Workday-Prism-Analytics Valid Test Vce Free & Certification Success Guaranteed, Easy Way of Training & Workday Workday Pro Prism Analytics Exam

We have always taken care to provide our customers with the very best. So we provide numerous benefits along with our Workday Workday Pro Prism Analytics Exam exam study material. We provide our customers with the demo version of the Workday Workday-Prism-Analytics Exam Questions to eradicate any doubts that may be in your mind regarding the validity and accuracy. You can test the product before you buy it.

### Workday Pro Prism Analytics Exam Sample Questions (Q18-Q23):

#### NEW QUESTION # 18

You have published a derived dataset to build a Prism data source. For reports using this Prism data source, when is data updated?

- A. At reimport into tables and republish of the datasource.
- B. At republish of the datasource only.
- C. At report runtime.
- D. At reimport into tables only.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a published Prism data source (PDS) contains a snapshot of data from a derived dataset at the time of publishing. According to the official Workday Prism Analytics study path documents, for reports using a Prism data source, the data is updated at reimport into tables and republish of the datasource (option B). A derived dataset typically sources data from underlying tables (via import stages), and any updates to the source data require two steps: (1) reimporting the updated data into the tables (e.g., via a Data Change task), and (2) republishing the derived dataset to refresh the Prism data source with the new data. Reports using the PDS will reflect the updated data only after both steps are completed, as the data source is a static snapshot until republished.

The other options are incorrect:

\* A. At republish of the datasource only: Republishing alone does not update the data if the underlying tables have not been reimported with new data; both steps are necessary.

\* C. At reimport into tables only: Reimporting into tables updates the source data, but the PDS remains unchanged until the dataset is republished.

\* D. At report runtime: Reports do not dynamically update the PDS at runtime; they use the data as it exists in the PDS at the time of the last publish.

The combination of reimporting into tables and republishing the data source ensures that reports reflect the most current data.

### NEW QUESTION # 19

A Prism data administrator is ready to create a Prism data source. As data is updated in Prism, the goal is to update the data in the Prism data source concurrently, enabling immediate incremental updates. How should the administrator create the Prism data source?

- A. Publish a derived dataset with the Prism: Default to Dataset Access Domain.
- B. Set Data Source Security on a derived dataset and select Publish.
- C. Create a table and select Publish.
- **D. Create a table and select the Enable for Analysis checkbox.**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, creating a Prism data source that supports immediate incremental updates as data is updated in Prism requires a specific configuration. According to the official Workday Prism Analytics study path documents, the administrator should create a table and select the Enable for Analysis checkbox (option A). The "Enable for Analysis" option, when selected during table creation, allows the table to be used directly as a Prism data source with real-time updates. This setting ensures that as data in the table is updated (e.g., through a Data Change task), the changes are immediately reflected in the Prism data source, enabling incremental updates without the need for republishing. This is particularly useful for scenarios requiring near- real-time data availability in reporting or analytics.

The other options do not achieve the goal of immediate incremental updates:

\* B. Create a table and select Publish: Publishing a table creates a static Prism data source, but updates to the table require republishing, which does not support immediate incremental updates.

\* C. Publish a derived dataset with the Prism: Default to Dataset Access Domain: Publishing a derived dataset creates a data source, but updates to the underlying data require republishing the dataset, which is not concurrent or incremental.

\* D. Set Data Source Security on a derived dataset and select Publish: Setting security and publishing a derived dataset follows the same process as option C, requiring republishing for updates, which does not meet the requirement for immediate updates.

Selecting the "Enable for Analysis" checkbox when creating a table ensures the Prism data source supports concurrent, incremental updates as data changes in Prism.

### NEW QUESTION # 20

When using a window function to calculate averages in Prism, what field type must the function operate on?

- A. Numeric
- B. Text
- C. Date
- D. Boolean

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, window functions are used to perform calculations across a set of rows, such as calculating averages with a function like AVG. According to the official Workday Prism Analytics study path documents, the AVG window function, which computes the average, must operate on a field of type Numeric.

This is because averaging requires numerical values to perform arithmetic operations (e.g., summing the values and dividing by the count of rows). Non-numeric field types, such as Text or Date, cannot be averaged, and Boolean fields (true/false) are not suitable for this type of calculation. For example, a window function like AVG(salary) OVER (PARTITION BY department) would calculate the average salary per department, where "salary" must be a Numeric field.

The other options are incorrect:

- \* A. Text: Text fields cannot be used for arithmetic operations like averaging.
- \* B. Boolean: Boolean fields (true/false) are not suitable for calculating averages.
- \* D. Date: Date fields cannot be directly averaged; they require conversion to a numeric representation (e.g., days since a reference date) first.

The requirement for a Numeric field type ensures that the AVG window function can perform the necessary mathematical computations accurately.

## NEW QUESTION # 21

A Prism data writer needs to create a new Prism calculated field on a derived dataset using the CASE function. When creating a calculated field, what symbol do you use to view a list of fields that you can select from in the dataset?

- A. (
- B. {
- C. [
- D. #

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when creating a calculated field in a derived dataset, users often need to reference existing fields in the dataset within their expressions, such as in a CASE function. According to the official Workday Prism Analytics study path documents, to view and select from a list of available fields in the dataset while building a calculated field expression, the user types the [ symbol (left square bracket). This symbol triggers a dropdown list of all fields in the dataset, allowing the user to select the desired field without manually typing its name, reducing the risk of errors. For example, typing [ and selecting a field like "Employee\_ID" will insert [Employee\_ID] into the expression, which can then be used in the CASE function logic.

The other symbols do not serve this purpose:

- \* B. (: Parentheses are used for grouping expressions or defining function parameters, not for field selection.
- \* C. #: The hash symbol is not used in Prism Analytics for field selection; it may be associated with other functionalities in different contexts.
- \* D. {: Curly braces are not used for field selection in Prism Analytics; they may be used in other systems for different purposes, such as templating.

The use of the [ symbol ensures an efficient and accurate way to reference fields in a calculated field expression, streamlining the creation process in Prism Analytics.

### NEW QUESTION # 22

A report that uses a Prism data source that you created has a brand new requirement that Expense Partner by Location should only see expense reports for workers for the locations they support. Given that you have the Location Hierarchy (instance) field in your dataset used for publishing, how can you adjust to meet the requirement?

- A. Run the Edit Data Source Security task to update row-level security.
- **B. Run the Edit Data Source Security task to update row-level security and then republish the PDS.**
- C. Run the Edit Data Source Security task to update the Securing Entities.
- D. Run the Edit Data Source Security task to update the Securing Entities and then republish the PDS.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, restricting access to specific rows in a Prism data source (PDS) based on a field like Location Hierarchy for users such as Expense Partners requires implementing row-level security.

According to the official Workday Prism Analytics study path documents, to meet the requirement that Expense Partners only see expense reports for the locations they support, you should run the Edit Data Source Security task to update row-level security and then republish the PDS (option B).

The Location Hierarchy (instance) field in the dataset can be used to define row-level security rules, ensuring that each Expense Partner only sees data for their assigned locations. The Edit Data Source Security task allows you to configure row-level security by mapping the Location Hierarchy field to the user's security profile (e.g., their assigned locations). After updating the security settings, republishing the Prism data source is necessary to apply the changes, ensuring the updated security rules take effect in the reports that use the data source.

The other options are incorrect:

\* A. Run the Edit Data Source Security task to update the Securing Entities and then republish the PDS:

Securing Entities are used to control overall access to the data source (e.g., via security domains), not to restrict data at the row level based on a field like Location Hierarchy.

\* C. Run the Edit Data Source Security task to update row-level security: While updating row-level security is correct, the changes will not take effect in reports until the data source is republished, making this option incomplete.

\* D. Run the Edit Data Source Security task to update the Securing Entities: As with option A, updating Securing Entities does not address row-level security for location-based restrictions.

Updating row-level security and republishing the PDS ensures that Expense Partners only see the relevant expense reports, meeting the requirement while maintaining security governance.
