CompTIA XK0-005 Exam | XK0-005 Latest Exam Pattern - Supplying you best XK0-005 Valid Test Syllabus

The result of your exam is directly related with the XK0-005 learning materials you choose. So our company is of particular concern to your exam review. Getting the XK0-005 certificate of the exam is just a start. Our XK0-005 practice materials may bring far-reaching influence for you. Any demands about this kind of exam of you can be satisfied by our XK0-005 training quiz. So our XK0-005 practice materials are of positive interest to your future. Such a small investment but a huge success, why are you still hesitating?

CompTIA XK0-005, also known as the CompTIA Linux+ Certification Exam, is a vendor-neutral certification exam designed to validate the skills and knowledge of candidates who want to work with Linux operating systems. XK0-005 exam is intended for those who have experience with Linux and want to advance their careers in the field of IT. CompTIA Linux+ Certification Exam certification demonstrates that candidates have a strong understanding of Linux system administration and can manage and troubleshoot Linux systems in a professional setting.

CompTIA XK0-005, also known as the CompTIA Linux+ certification, is a certification exam that validates the skills and knowledge of IT professionals in managing and administering Linux systems. XK0-005 Exam is designed to test the candidates' ability to install, configure, and maintain Linux environments, including systems security, networking, and storage management.

CompTIA Linux+ Certification Exam Sample Questions (Q136-Q141):

NEW QUESTION # 136

A systems administrator is tasked with mounting a USB drive on a system. The USB drive has a single partition, and it has been mapped by the system to the device /dev/sdb. Which of the following commands will mount the USB to /media/usb?

- A. mount /dev/sdb0 /media/usb
- B. mount -t usb /dev/sdb1 /media/usb
- C. mount /dev/sdb1 /media/usb
- D. mount /dev/sdb /media/usb

Answer: C

Explanation:

The mount /dev/sdb1 /media/usb command will mount the USB drive to /media/usb. This command will attach the filesystem on the first partition of the USB drive (/dev/sdb1) to the mount point /media/usb, making it accessible to the system. The mount /dev/sdb0 /media/usb command is invalid, as there is no such device as /dev/sdb0. The mount /dev/sdb /media/usb command is incorrect, as it will try to mount the entire USB drive instead of its partition, which may cause errors or data loss. The mount -t usb /dev/sdb1 /media/usb command is incorrect, as usb is not a valid filesystem type for mount. References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 14: Managing Disk Storage, page 455.

NEW QUESTION # 137

A Linux systems administrator is implementing Source Code Management for the web application server configuration files located in /etc/httpd/. Which of the following steps should the administrator perform FIRST?

- A. Create a new repository using 'git init'
- B. Configure the directory for git using 'git config'
- C. Retrieve the remote changes using 'git commit'
- D. Clone the remote repository using 'git clone'

Answer: A

Explanation:

git-init - Create an empty Git repository or reinitialize an existing one git-config - Get and set repository or global options

NEW QUESTION # 138

Following the migration from a disaster recovery site, a systems administrator wants a server to require a user to change credentials at initial login. Which of the following commands should be used to ensure the aging attribute?

- A. chage -d 1 user
- B. chage -E 0 user
- C. chage -d 0 user
- D. chage -d 2 user

Answer: C

Explanation:

The chage command can be used to change the user password expiry information. The -d or --lastday option sets the last password change date. If the value is 0, the user will be forced to change the password at the next login. See chage command in Linux with examples and 10 chage command examples in Linux.

NEW QUESTION # 139

SIMULATION

A new drive was recently added to a Linux system. Using the environment and tokens provided, complete the following tasks:

- Create an appropriate device label.
- Format and create an ext4 file system on the new partition.

The current working directory is /.

INSTRUCTIONS

Use the drop-down menus to select the proper objects to complete these tasks.

Some commands are partially complete.

Not all objects will be used, and some may be used more than once.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

parted -s	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	gpt		
parted -s	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	1 10G
mkfs.	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>	<div>sdb ext3 mkdir sdc secondary /dev/sdc /data lsblk gpt mklabel ext4 parted mkpart /dev/sdc1 primary ext2 /dev/dev1</div>			

CompTIA

Answer:

Explanation:

Step 1: Create a Device Label

Command: parted -s - This command initiates the partitioning tool.

Choose: /dev/sdc - This is the new device added, likely /dev/sdc.

Action: mklabel gpt - This command will create a GPT partition table on /dev/sdc.

Step 2: Create a New Partition

Command: parted -s - Again, use parted to partition the drive.

Choose: /dev/sdc - Still working with the new drive.

Action: mkpart primary ext4 1 10G - This command creates a new primary partition with ext4 file system type from 1GB to 10GB on /dev/sdc.

Step 3: Format the New Partition to ext4

Command: mkfs.ext4 - This will format the new partition.

Choose: /dev/sdc1 - The partition created is /dev/sdc1, so use it to create the ext4 file system.

NEW QUESTION # 140

A Linux administrator recently downloaded a software package that is currently in a compressed file. Which of the following commands will extract the files?

- A. gzip
- B. unzip -v
- C. bzip2 -z
- D. funzip

Answer: A

Explanation:

The command gzip can extract files that are compressed with the gzip format, which has the extension .gz. This is the correct command to use for the software package.
