Top XK0-006 Latest Exam Preparation | Useful XK0-006 Online Training Materials and Unparalleled CompTIA Linux+ Certification Exam Real Braindumps

Our XK0-006 Exam Braindumps are the hard-won fruit of our experts with their unswerving efforts in designing products and choosing test questions. Pass rate is what we care for preparing for an examination, which is the final goal of our XK0-006 certification guide. According to the feedback of our users, we have the pass rate of 99%, which is equal to 100% in some sense. The high quality of our products also embodies in its short-time learning. You are only supposed to practice CompTIA Linux+ Certification Exam guide torrent for about 20 to 30 hours before you are fully equipped to take part in the examination.

CompTIA Linux+ Certification Exam Sample Questions (Q87-Q92):

NEW QUESTION # 87

In the echo "profile-$num-$name"line of a shell script, the variable $numseems to not be expanding during execution. Which of the following notations ensures the value is expanded?

- A. echo "profile-${num}-$name"
- B. echo "profile-$(num)-$name"
- C. echo "profile-'$num'-$name"
- D. echo 'profile-$num-$name'

Answer: A

Explanation:
Using ${num} ensures correct variable expansion, especially when variables are adjacent to other characters or hyphens. This prevents ambiguity and guarantees $num is properly expanded within the string.

NEW QUESTION # 88

A systems administrator needs to enable routing of IP packets between network interfaces.
Which of the following kernel parameters should the administrator change?

- A. net.ipv4.ip_forward
- B. net.ipv4.ip_local_port_range
- C. net.ipv4.ip_multicast
- D. net.ipv4.ip_route

Answer: A

Explanation:
The net.ipv4.ip_forward kernel parameter controls whether the Linux kernel can forward IP packets between network interfaces, enabling routing functionality when set to 1.

NEW QUESTION # 89

A Linux administrator receives reports about MySQL service availability issues. The administrator observes the following information:

```
# uptime -p
up 2 minutes

# journalctl

localhost kernel: mysqld invoked oom-killer: gfp_mask=0x201da, order=0, oom_score_adj=0
localhost kernel: mysqld cpuset=/ mems_allowed=0
[...]
```

Which of the following explains why the server was offline?

- A. The process was intentionally terminated by a privileged user.
- B. The process crashed because of a filesystem error.
- C. The process exhausted server memory.
- D. A network outage caused a service availability issue.

Answer: C

Explanation:
The logs show mysqld invoked oom-killer, which is the Linux Out-Of-Memory (OOM) killer. This indicates MySQL consumed too much memory, forcing the kernel to terminate it to protect the system, which caused the service outage.

NEW QUESTION # 90

An administrator updates the network configuration on a server but wants to ensure the change will not cause an outage if something goes wrong. Which of the following commands allows the administrator to accomplish this goal?

- A. netplan ip
- B. netplan apply
- C. netplan try
- D. netplan rebind

Answer: C

Explanation:
netplan try applies the new network configuration temporarily and waits for user confirmation. If not confirmed, it automatically reverts, preventing outages from misconfigurations.

NEW QUESTION # 91

Users connecting to a MySQL database on a Linux system report frequent errors. An administrator reviews the following partial output of the /proc/meminfo and freecommands:

Which of the following should the administrator do to ensure that the MySQL service will continue to run even if the system runs out of swap space? (Choose two.)

- A. Use disk quotas on the swap space to prevent MySQL from overutilizing the swap partition.
- B. Issue the mkswap /dev/sda2; swapon -v /dev/sda2 command.
- C. Issue the dd if=/dev/zero of=/swapfile bs=1024 count=65536 command.
- D. Reload the /etc/fstab file by issuing the mount -a command.(Not sufficient alone)
- E. Issue the sysctl -w vm.overconunit_memory=2 command.(Invalid key)
- F. Issue the sysctl -w vm.overcommit_ratio=100 command.

Answer: B,C

Explanation:
Creating a swap file with dd if=/dev/zero of=/swapfile bs=1024 count=65536 allocates additional swap space that MySQL can use when RAM is exhausted.
Formatting and enabling a swap partition with mkswap /dev/sda2; swapon -v /dev/sda2 brings another swap device online, further increasing the system's swap capacity.

NEW QUESTION # 92

......

The privacy protection of users is an eternal issue in the internet age. Many illegal websites will sell users' privacy to third parties, resulting in many buyers are reluctant to believe strange websites. But you don't need to worry about it at all when buying our XK0-006 study materials. We assure you that we will never sell users' information because it is damaging our own reputation. In addition, when you buy our XK0-006 Study Materials, our website will use professional technology to encrypt the privacy of every user to prevent hackers from stealing.
