

XK0-006 Real Question - Valid Exam XK0-006 Vce Free

Our company has employed a lot of leading experts in the field to compile the XK0-006 exam torrents, so you can definitely feel rest assured about the high quality of our XK0-006 question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our XK0-006 Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our XK0-006 question torrents since you are sure to get the certification.

XK0-006 exam torrent is famous for instant download. You will receive downloading link and password within ten minutes, and if you don't receive, just contact us, we will check for you. In addition, XK0-006 exam materials are high quality, it covers major knowledge points for the exam, you can have an easy study if you choose us. We offer you free demo to have a try before buying XK0-006 Exam Torrent, so that you can know what the complete version is like. Free update for one year is available, so that you can get the latest version for XK0-006 exam dumps timely.

Valid Exam XK0-006 Vce Free | XK0-006 Vce Exam

The CompTIA XK0-006 exam questions are designed and verified by experienced and qualified CompTIA XK0-006 exam trainers. They work together and share their expertise to maintain the top standard of CompTIA XK0-006 Exam Practice test. So you can get trust on CompTIA XK0-006 exam questions and start preparing today.

CompTIA Linux+ Certification Exam Sample Questions (Q61-Q66):

NEW QUESTION # 61

A Linux administrator needs to analyze a compromised disk for traces of malware. To complete the analysis, the administrator wants to make an exact, block-level copy of the disk. Which of the following commands accomplishes this task?

- A. `dd if=/dev/sdc of=/tmp/image bs=8192`
- B. `cp -rp /dev/sdc/* /tmp/image`
- C. `cpio -i /dev/sdc -ov /tmp/image`
- D. `tar cvzf/tmp/image /dev/sdc`

Answer: A

Explanation:

The dd command performs a low-level, block-by-block copy of a device. Using `if=/dev/sdc` (input file) and `of=/tmp/image` (output file) with a block size (bs) ensures an exact replica of the disk, suitable for forensic analysis.

NEW QUESTION # 62

Which of the following commands should an administrator use to convert a KVM disk file to a different format?

- A. qemu-ng
- B. qemu-kvm
- C. qemu-io
- **D. qemu-img**

Answer: D

Explanation:

The qemu-img command is used to create, convert, and manage disk image files for KVM/QEMU. It allows conversion between formats such as qcow2, raw, and vmdk.

NEW QUESTION # 63

A Linux administrator just finished setting up passwordless SSH authentication between two nodes. However, upon test validation, the remote host prompts for a password. Given the following logs:

```
-rw-----. 1 root root 588 Apr 3 2022 authorized_keys
avc: denied { read } for pid=xxxx comm="sshd" name="authorized_keys" dev="dm-5" ino=xxxx scontext=system_u:system_r:sshd_t:s0-s0:c0.c1023
tcontext=unconfined_u:object_r:home_root_t:s0 tclass=file
[...]

SELinux status: enabled
SELinuxfs mount: /sys/fs/selinux
SELinux root directory: /etc/selinux
Loaded policy name: targeted
Current mode: enforcing
Mode from config file: enforcing
Policy MLS status: enabled
Policy deny_unknown status: allowed
Max kernel policy version: 31
```

Which of the following is the most likely cause of the issue?

- **A. The authorized_keysfile does not have the correct security context to match SELinux policy.**
- B. The SELinux policy is incorrectly targeting the unconfined_ucontext.
- C. The authorized_keysfile has the incorrect root permissions assigned.
- D. The administrator forgot to restart the SSHD after creating the authorized_keysfile.

Answer: A

Explanation:

The log shows avc: denied { read } caused by SELinux when sshd tries to access authorized_keys. The file has the wrong SELinux context (unconfined_u:object_r:home_root_t) instead of the expected context for SSH. This mismatch blocks SSH key authentication even though file permissions are correct. Adjusting the SELinux context (e.g., with restorecon) resolves the issue.

NEW QUESTION # 64

An administrator thinks that the user Joe may be running an unauthorized process on a Linux server. Which of the following commands should the administrator run to confirm this idea?

- A. jobs -n 'Joe'
- B. lsof -p 'Joe'
- **C. top -u 'Joe'**
- D. ps -ax 'Joe'

Answer: C

Explanation:

top -u Joe filters the process display to only show processes owned by user Joe, allowing the administrator to see if Joe is running any unauthorized processes.

NEW QUESTION # 65

Following the completion of monthly server patching, a Linux administrator receives reports that a critical application is not functioning. Which of the following commands should help the administrator determine which packages were installed?

- A. dnf search
- B. dnf list
- C. dnf history
- D. dnf info

Answer: C

Explanation:

The dnf history command shows a log of past package operations (install, update, remove), allowing the administrator to review which packages were installed or updated during the patching process.

NEW QUESTION # 66

.....

With the coming of information age in the 21st century, XK0-006 exam certification has become an indispensable certification exam in the IT industry. Whether you are a green hand or an office worker, Test4Cram provides you with CompTIA XK0-006 Exam Training materials, you just need to make half efforts of others to achieve the results you want. Test4Cram will struggle with you to help you reach your goal. What are you waiting for?
