Zscaler Digital Transformation Administrator Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which of the following is unrelated to the properties of 'Trusted Networks'?

- A. Org ID
- B. DNS Server
- C. Default Gateway
- D. Network Range

Answer: A

Explanation:

Trusted Networks in Zscaler are defined using network-specific parameters such as DNS Server, Default Gateway, and Network Range, which are used to identify known internal networks. These properties help Zscaler Client Connector recognize when a device is on a corporate network. Org ID, however, is unrelated to the network characteristics and is instead associated with tenant identification in Zscaler's cloud infrastructure.

NEW QUESTION # 87

Which Platform Service enables visibility into the headers and payload of encrypted transactions?

- A. Reporting and Logging
- B. Device Posture
- C. Policy Framework
- D. TLS Decryption

Answer: D

Explanation:

The TLS Decryption platform service intercepts and decrypts SSL/TLS sessions, granting Zscaler access to both headers and

payloads of encrypted traffic for inspection and policy enforcement.

NEW QUESTION # 88

An organization has more than one ZIA instance, each on different clouds. The organization is using the same login domain for both and upon login users are given this menu in ZCC asking which cloud they would like to join. What steps could an Administrator take to avoid having this menu appear?

- A. Customize an MSI version of the ZCC file specifying the USERDOMAIN variable.
- B. Create only one SAML integration with the desired ZIA instance.
- **C. Customize an MSI version of the ZCC file specifying the CLOUDNAME variable.**
- D. Federate the login domain between two different IDP instances.

Answer: C

Explanation:

To avoid prompting users with a cloud selection menu in the Zscaler Client Connector (ZCC), administrators should customize the MSI installation package with the CLOUDNAME parameter. This setting ensures the ZCC automatically connects to the correct ZIA cloud instance without user intervention. The CLOUDNAME corresponds to the designated cloud name for the organization's ZIA tenant, effectively bypassing the prompt. This is outlined under Zscaler's deployment and configuration instructions for ZCC. Reference: Zscaler Digital Transformation Study Guide - Zscaler Internet Access (ZIA) > Deployment
