## Zscaler Digital Transformation Administrator Sample Questions (Q119-Q124):

### NEW QUESTION # 119

Which filtering policy blocked access to the Network Application?

- A. Browser Control
- B. Sandbox
- C. DLP
- **D. Firewall Filtering**

**Answer: D**

Explanation:

Firewall Filtering policies govern network-level application traffic, so access to a Network Application is blocked by a Firewall Filtering rule.

### NEW QUESTION # 120

Zscaler Platform Services works upon unencrypted data from encrypted communications due to which of the following?

- A. Web Filtering
- **B. TLS Inspection**
- C. Tenant Restrictions
- D. Antivirus

**Answer: B**

Explanation:

This decryption is enabled by TLS Inspection, which intercepts SSL/TLS sessions, decrypts the payloads for inspection, and then re-encrypts the traffic before forwarding to the destination.

### NEW QUESTION # 121

An organization has more than one ZIA instance, each on different clouds. The organization is using the same login domain for both

and upon login users are given this menu in ZCC asking which cloud they would like to join. What steps could an Administrator take to avoid having this menu appear?

- A. Customize an MSI version of the ZCC file specifying the USERDOMAIN variable.
- B. Create only one SAML integration with the desired ZIA instance.
- C. Federate the login domain between two different IDP instances.
- **D. Customize an MSI version of the ZCC file specifying the CLOUDNAME variable.**

**Answer: D**

Explanation:

To avoid prompting users with a cloud selection menu in the Zscaler Client Connector (ZCC), administrators should customize the MSI installation package with the CLOUDNAME parameter. This setting ensures the ZCC automatically connects to the correct ZIA cloud instance without user intervention. The CLOUDNAME corresponds to the designated cloud name for the organization's ZIA tenant, effectively bypassing the prompt. This is outlined under Zscaler's deployment and configuration instructions for ZCC.
